

# GCCF REGISTRATION POLICY FOR EXOTIC CATS

JUNE 2018

In this document 'Exotic' shall describe all shorthaired Exotics and 'Persian longhairs' shall describe all longhaired Exotic cats.

## **FULL REGISTER**

This register is used for Exotic or Persian Longhairs with Full status which have within the three preceding generations (Parent, Grand-Parent, and Great-Grand Parent) only Exotics or Persian Longhairs of the breeds listed for registration on the Full Register for that colour/pattern.

## **SUPPLEMENTARY REGISTER**

This register is used for Exotic and Persian Longhairs with Full status which have within the preceding three generations only Exotic, Persian or Persian Longhairs of the breeds listed for registration on the Supplementary Register for that colour/pattern.

**NOTE:** Exotics with British Shorthair parents, grand-parents or great grand-parents that were eligible for Challenge Certificates on 25 October 2000 shall continue to be so and so shall their suitable progeny for three generations from 25 October 2000. Suitable progeny born during this three-generation exemption period shall be placed on the Supplementary Register. Thereafter, the Policy above shall become fully effective.

Progeny of cats on this Register shall automatically be placed on the Full Register when the criteria for entry to the Full Register are met.

## **REFERENCE REGISTER**

This is used to register cats of Exotic or Persian Longhair appearance where the breeding does not conform to this Registration Policy. They will be registered as 'no recognised breed'.

If a breeding programme for a new colour/pattern is subsequently submitted to the Breed Advisory Committee an application for breed (colour/pattern) recognition may be made to the GCCF Board of Directors and if successful, the cats involved will be treated as if registered on the Reference Register but not transferred to that register.

## **NOTES:**

1. Polycystic Kidney Disease (PKD) - only Exotic or Persian longhairs that are deemed to be PKD Negative will be registered on the Active Register as suitable for breeding.

All Exotics or Persian longhairs which have been genetically tested as positive for PKD, shall be registered on the Genetic Register, or on the Non-Active register if so requested by the breeder.

All Exotics or Persian longhairs, which are not eligible for registration on the Active Register, shall be registered on the Genetic Register, or on the Non-Active register if so requested by the breeder.

Offspring of cats registered on the Genetic Register may only be registered on the Active Register if they have themselves been genetically tested as normal (clear) for PKD.

All other offspring of cats registered on the Genetic Register shall be registered on the Genetic register, or on the Non-Active Register if so requested by the breeder. Cats must be micro chipped for identification purposes, and the microchip number shown on the laboratory test results, and the cat's veterinary record.

2. BAER testing - all white cats used for breeding should have normal hearing, so for all cats registered active, and to be registered active in future, will need a certificate to prove they hear normally in both ears to have progeny registered.
3. Progressive Retinal Atrophy (PRA) - this is a condition in which young kittens go blind by the age of about 15 weeks. Any cat imported into GCCF must be tested negative for PRA before it can be registered on the Active Register. This provision is mandatory from approval of this registration policy by the GCCF from 20<sup>th</sup> June 2018.

## **BREEDING REGISTERS**

As well as the registers listed above, the Breeder can also control the Exotic for breeding only, by using the following three additional registers.

### **Active Register**

On this register the breeder has stated the cat is suitable for breeding. The Cat/Kitten can also be shown in the relevant breed classes at GCCF shows if it is on the Full or Supplementary Registers as above. Kittens produced may be registered with no restrictions (unless any are imposed by written agreement with the breeder), provided that the stud chosen is suitable according to the Registration Policy for the colour/pattern.

### **Non-Active Register**

At the time of registration, the breeder only may elect to put kittens from one litter on the Non-Active Register. The GCCF **will not** subsequently register progeny from this cat. Only the breeder may ask for a cat previously registered on the Non-Active register to be transferred to the Active Register. Cats placed on the Non-Active register may be shown as Kittens, Entire Adults or Neutered Adults in the relevant championship classes at GCCF shows providing they are on the Full or Supplementary Register for their breed. They can also be shown in the Pedigree Pet section of GCCF shows.

### **Supplementary Register – Genetics Register (Active)**

Exotics from any mating where a recessive gene (Note 4), will or could be passed on, that is needed for a specific breeding programme, but that might be undesirable in other breeding programmes. Cats can be transferred from this register on production of a valid gene test certifying that the offspring are either non-carriers of the gene or are recognised specimens of the initial breeding programme. These cats may be shown at GCCF shows.

Note 4 - Only for use with genes where a DNA test is available.

## **INBREEDING POLICY**

A lot of breeding programmes contain a certain amount of inbreeding, but breeding animals that are too closely related can lead to undesirable traits and is to be discouraged. Matings between mother/son, father/daughter, full brother/sister are not considered desirable and any kittens from these matings will be registered on the Non-Active Register, unless the mating has been recommended by veterinary or genetic counselling and supported by the BAC and GCCF Genetics Committee. Under these circumstances the breeder should apply in the first instance to the Exotic BAC for the above-mentioned support. (See the table below for the levels of the Co-efficient of Inbreeding). See also GCCF Rules Section 1, 1d.

<b>Levels of the Co-efficients of Inbreeding (COI's)</b>		
<b>Percentage</b>	<b>Level</b>	<b>Comments</b>
0 to 10%	Low	COI's which fall within this band are ideal.
10 to 20%	Fair	COI's which fall within this banding are reasonable and acceptable
20 to 25%	Close	COI's which fall within this banding represent close matings approaching the higher end of what breeders should normally consider.
25 to 40%	High	Matings producing higher COI's than the first degree matings should only be undertaken by experienced breeders for very specific reasons. If offspring are retained for breeding they should only be used for matings producing low COI's.
40% +	Not Advised	The welfare and health of cats with such high levels of inbreeding is highly likely to be compromised and such matings should not be undertaken,

The following pages give details of the Registration Policy for each of the pattern/colour groups for the Exotic Shorthair.

In each table:

- The first column lists the patterns/colours for the breed group.
- The second column lists the most desirable parents. Offspring of these matings will be registered on the Full Register providing there are no cats within the previous three generations that would prevent this.
- The third column shows less desirable but still acceptable pattern/colour matings. Offspring of these matings will be registered on the Supplementary Register.
- The fourth column lists patterns/colours which are not advisable for the reasons given and offspring of these matings will be registered on the Reference Register, including those that form part of a GCCF approved breeding programme when they will be registered on the Reference Register.

## **Self Exotics**

Colour/Pattern of Exotic Shorthair to be registered	Colours acceptable for the Full Register	Colours acceptable for the Supplementary Register	Others to be placed on the Reference Register
<p><b>Self Coloured Exotics</b></p> <p><b>EXO w 61 White - Blue-Eyed</b>  <b>EXO w 62 White - Orange-Eyed</b>  <b>EXO w 63 White - Odd-Eyed</b></p> <p><b>EXO n - Black</b>  <b>EXO a - Blue</b>  <b>EXO b - Chocolate</b>  <b>EXO c - Lilac</b>  <b>EXO d - Red</b>  <b>EXO e - Cream</b></p>	<p><b>Exotics of the following sections</b></p> <p>AC Self Exotic  AC Tortie Exotic</p> <p>AC Self Exotic  AC Tortie Exotic  AC Bi-Colour or Tortie &amp; White Exotic</p>	<p><b>Exotics listed on the Full Register and Exotics cats in the following sections:</b></p> <p><b>Tabby Exotics</b> (excluding green-eyed)  EXO ns 22 62 - EXO js 22  EXO ns 23 62 - EXO js 23  EXO ns 24 62 - EXO js 24  EXO n 22 - EXO j 22  EXO n 23 - EXO j 23  EXO n 24 - EXO j 24</p> <p><b>Bi and Tri Colour Exotics</b>  EXO n 03 - EXO e 03  EXO f 03 - EXO j 03  EXO n 03 21 - EXO e 03 21  EXO f 03 21 - EXO j 03 21  EXO ns 03 21 - EXO js 03 21  EXO ns 03 11 - EXO js 03 11  EXO ns 03 12 - EXO js 03 12  EXO ns 03 - EXO js 03</p> <p><b>Silver Series Exotics (excluding green-eyed)</b>  EXO ns - EXO js  EXO ns 11 - EXO js 11  EXO ns 12 - EXO js 12</p> <p><b>Colourpointed</b>  EXO n 33 - EXO j 33  EXO n 21 33 - EXO j 21 33  If the parent of the kitten is a Colourpoint, the registration will be over stamped <b>“carries Colourpoint”</b>, or if a Colourpoint Carrier that has not been DNA tested full colour, the registration will be over stamped <b>“may carry Colourpoint”</b>.</p>	<p>Any Green-eyed breed from the Exotic section.</p> <p>Any cat from another breed section or any unregistered cat with no progression.</p>

## Tortoiseshell Exotics
