

## MAINE COON (MCO)

### Scale of Points

<b>Head:</b> Including general shape and proportions: shape, size and ear set; shape, size, set and colour of eyes; nose length and profile; cheeks, muzzle and chin	35
<b>Body:</b> Including shape and proportions; size, bone structure, muscularity and condition, height and thickness of legs; shape and size of paws; shape and length of tail	30
<b>Coat:</b> Including length and texture; frontal ruff; ear feathering and tufting; tail furnishings; paw furnishings	20
<b>Colour and pattern</b>	15

### General Type description

The Maine Coon is a semi-longhaired cat of medium Foreign type and is distinguished by its large size, bone structure, rectangular appearance and flowing coat. The Maine Coon evolved as a working domesticated cat in a rural environment; this role is reflected in a muscular cat of rugged outdoor appearance with a characteristic weatherproof coat and the demeanour of an alert capable hunter.

Head	Medium in length, the nasal bridge being equidistant from the ear line and the tip of the nose, with the width being slightly less than the length of the head. Allowance should be made for additional breadth or jowls in mature males. The muzzle should be square with firm chin: chin, upper lip and nose leather should fall in a perpendicular line. Cheeks fairly full, with high cheekbones. Bite level. Nose of uniform width with shallow concave curve at the nasal bridge when viewed in profile, and without a sharp break or stop.
Ears	Large, tall ears, wide at base and tapering to appear pointed at the tip; set high but well apart.
Eyes	Full and round, spaced wide apart with a slightly oblique aperture and set. Shades of green, gold or copper; coat and eye colour may be unrelated. Odd or blue eyes are permissible in white cats.
Body and neck	Body large to medium size, solid and muscular with breadth of chest. Long body with proportionate limbs to create the characteristic rectangular appearance; square rump. Neck moderately long; particularly thick and muscular in mature males.
Legs and paws	Substantial legs with large round paws; toes carried close, five in front, four behind.
Tail	Long, at least the length of the back, wide at the base and tapering towards the tip.
Coat	Waterproof consisting of an undercoat covered by a more substantial glossy topcoat. Fur shorter on the head, neck and shoulders increasing in length down the back, flanks and tail. A fluffy appearance is undesirable. Breeches and belly fur full and shaggy. Frontal ruff beginning at the base of the ears; heavier in males than females. Tail fur long, profuse and flowing; not bushy. Ears feathered and preferably tufted at the tips; the ear feathering should extend beyond the outer edges of the ear. Paws tufted, with long tufts emanating from under the paws, extending backwards to create a snowshoe effect.
Coat colour and pattern	The Maine Coon is recognised in a variety of solid colours (including white in all eye colours); tortoiseshell; tabby colours (classic and mackerel patterns) with or without silver; shaded and smoke colours; bi-colour and parti-colour (e.g. solid/tabby/tortoiseshell/shaded/smoke colour and white).

### Notes:

1. Since the Maine Coon is slow to mature (taking up to 4 years), allowance should be made as to their size when judging younger cats. The balance of the cat is of uppermost importance.
2. The cat loses coat during the summer months.
3. Different coat colours may have different textured coats

### Withhold all awards for:

1. Wrongly registered adults, kittens or neuters. NOTE: These should be marked as wrong colour on judge's slips and disqualified.
2. Blue or odd eyes in cats of a colour other than white
3. Van Patterned Cats

### **Withhold Certificates or First Prizes in Kitten Open Classes for:**

1. Cobby body shape and/or fine bone structure
2. Bi-Colour or Parti-colour cats that do not exhibit some white on all four paws, belly and chest
3. Definite nose break or stop
4. Straight profile or pronounced nose bump
5. Untufted paws
6. White markings (including buttons, locketts or spots) anywhere other than those referred to in the SOP
7. Overall even coat length
8. Persian like coat texture
9. Serious colour or pattern faults
10. Any defect as listed in the preface to this SOP document

### **Faults**

1. Unsound base coat in Solid or Tortoiseshell coloured cats
2. Tabby markings in adult Smoke coloured cats
3. Heavy tabby markings in Shaded coloured cats
4. White extending beyond the throat in Non-Silver Tabby cats registered without white
5. Tarnishing in Silver Series cats
6. Heavily brindled coat in Tabby cats

COAT COLOURS Chocolate, Lilac and Siamese Points are not allowed.

### SOLID COLOURS

The fur should be sound to the roots in colour and free from any shadings, markings and patches of white hairs, except that red series solid cats may well show tabby markings. Nose leather, Paw pads and eye rims to tone with the body colour.

<b>(MCO w 61)</b>	<b>White - Blue Eye</b>
<b>(MCO w 62)</b>	<b>White - Orange Eye</b>
<b>(MCO w 63)</b>	<b>White - Odd Eye</b>
<b>(MCO w 64)</b>	<b>White - Green Eye</b>
<b>(MCO n)</b>	<b>Black</b>
<b>(MCO d)</b>	<b>Red</b>
<b>(MCO a)</b>	<b>Blue</b>
<b>(MCO e)</b>	<b>Cream</b>

### TORTOISESHELLS

The patterning should extend throughout the coat including the limbs, tail and face; blaze desirable. Base colour should be sound to the roots.

**(MCO f) Tortoiseshell** - Black and shades of red. Nose leather, paw pads and eye rims pink and/or black, depending on the distribution of the red.

**(MCO g) Blue Tortie** - Blue and shades of cream. Nose leather, paw pads and eye rims pink and/or blue depending on the distribution of the cream.

### SMOKE COLOURS

Any solid or tortoiseshell colour accepted. The undercoat should be silvery white with deep tips shading to the basic colour. The cat appears darkest on the back, head and feet. In a smoke cat the silvery white undercoat, which is next to the skin, should not be clearly visible when the cat is in repose. However, this can be seen when fur is parted or when the cat is moving. This is a genetically silver non-tabby variety of Maine Coon. The appearance of clear tabby markings in the coat is undesirable. However, it is accepted that Red Series Smoke colours may exhibit some faint markings which should not be unduly penalised in an otherwise good example of the breed. It should also be noted that kittens of all Smoke colours may well show ghost tabby markings on the body for which they should not be too heavily penalised. The presence of tabby markings in adults is undesirable.

#### **(MCO ns) Black Smoke**

Silvery white undercoat deeply tipped with black, and free from tabby markings. In motion, the silvery white undercoat is apparent; cat in repose appears black with no other markings. Extremities and face black, narrow band of silvery white at base of hair, next to skin, which may only be seen when the fur is parted. Nose leather and paw pads black.

#### **(MCO as) Blue Smoke**

The above is also the Standard for blue smoke except that, where the word 'black' occurs, 'blue' should be substituted. Nose leather and paw pads blue.

#### **(MCO ds) Red Smoke**

The above is also the Standard for red smoke except that, where the word 'black' occurs, 'red' should be substituted. Nose leather and paw pads pink.

#### **(MCO fs) Tortie Smoke**

Silvery white undercoat, deeply tipped with black and shades of red, which are clearly visible on both body and extremities. Cat in repose appears tortoiseshell. Extremities and face black and shades of red with narrow band of silvery white at base of hair next to skin, which may only be seen when the fur is parted. Red markings on the face are desirable. Nose leather and paw pads to conform to requirements for coat colour.

#### **(MCO es) Cream Smoke**

The Standard for Black Smoke is also the standard for cream smoke except that, where the word 'black' occurs, 'cream' should be substituted. Nose leather and paw pads pink.

### **(MCO gs) Blue Tortie Smoke**

The Standard for Tortie Smoke is also the Standard for Blue Tortie Smoke except that, where the words 'black and shades of red' occur, 'blue and cream' should be substituted and, where the word 'red' appears, 'cream' should be substituted. Nose leather and paw pads blue or pink to conform to requirements for coat colour.

### TABBY PATTERNS

Allowances to be made for diffusion of tabby markings in cats showing long or full flowing coats.

Recognised coat patterns are Classic and Mackerel pattern.

There is a tendency for tabbies to show white around the immediate area of the lips and lower jaw area. It is a serious fault if this extends beyond the throat in non-silver tabbies or tabbies registered without white. Silver- white colour on the throat and muzzle of silver tabbies/silver tortie tabbies is not a fault and the base colour may be diluted by the gene producing silver.

#### Classic Pattern:

All markings to be clearly defined and dense. On the forehead there should be a letter 'M' giving the impression of a frown. There should be an unbroken stripe running back from the outer corner of the eye and narrow lines on the cheeks. On the neck and upper chest there should be unbroken necklaces, the more the better. The edges of the ears to be the same colour as the markings with a central patch of ground colour resembling a thumb print. A series of lines run from above the 'M' marking, over the top of the head and extend to the shoulder markings. The shoulder markings form the outline of a butterfly, when viewed from above. On the back there should be an unbroken line running down the spine from the butterfly to the tail, and there should be a stripe on either side of this running parallel to it. These stripes should be separated from each other by stripes of ground colour. On each flank there should be an 'oyster" shaped patch which should have complete rings, as numerous as possible. The tip of the tail should be the same colour as the markings. The legs should be barred evenly with bracelets from the body markings to the toes which should be spotted. The back of the leg from the sole to the hock should be solid colour. The abdominal area should be spotted.

#### Mackerel Pattern:

All markings to be clearly defined and dense. On the forehead, there should be a letter 'M' giving the impression of a frown. There should be an unbroken stripe running from the outer corner of the eye and narrow lines on the cheeks. On the neck and upper chest there should be unbroken

necklaces, the more the better. The edges of the ears to be the same colour as the markings with a central patch of colour resembling a thumb print. A series of lines run from above the 'M' marking, over the top of the head and extend to the shoulder markings. There should be one narrow, unbroken central spine line on either side of which is a broken spine line from which the narrow lines which form the Mackerel pattern run vertically down the body. These lines should be unbroken and as narrow and numerous as possible. The tip of the tail should be the same colour as the markings.

**(MCO n 22) Brown Classic Tabby** Black markings on a warm copper agouti ground colour

**(MCO n 23) Brown Mackerel Tabby** Nose leather brick red, paw pads and eye rims black or brown.

**(MCO a 22) Blue Classic Tabby** Blue markings on a cool beige agouti ground colour.

**(MCO a 23) Blue Mackerel Tabby** Nose leather solid blue or pink edged with blue, paw pads and eye rims blue.

**(MCO d 22) Red Classic Tabby** Rich red markings on a bright apricot agouti ground colour.

**(MCO d 23) Red Mackerel Tabby** Nose leather, paw pads and eye rims deep pink.

**(MCO e 22) Cream Classic Tabby** Rich cream markings on a cooler cream agouti ground

**(MCO e 23) Cream Mackerel Tabby** colour. Nose leather, paw pads and eye rims pink.

**(MCO f 22) Tortie Classic Tabby** Black markings on a warm copper agouti ground which has

**(MCO f 23) Tortie Mackerel Tabby** been overlaid with shades of red. Nose leather brick red

and/or pink depending on the distribution of the red.

**(MCO g 22) Blue Tortie Classic Tabby** Blue markings on a cool beige agouti ground which has

**(MCO g 23) Blue Tortie Mackerel Tabby** been overlaid with shades of cream. Nose leather blue and/or pink

depending on the distribution of the cream.

- (MCO ns 22) Silver Classic Tabby** Colour and markings as above on a silver agouti ground.
- (MCO ns 23) Silver Mackerel Tabby** Nose leather, paw pads and eye rims as above.

- (MCO as 22) Blue Silver Classic Tabby**  
**(MCO as 23) Blue Silver Mackerel Tabby**  
**(MCO ds 22) Red Silver Classic Tabby**  
**(MCO ds 23) Red Silver Mackerel Tabby**  
**(MCO es 22) Cream Silver Classic Tabby**  
**(MCO es 23) Cream Silver Mackerel Tabby**  
**(MCO fs 22) Tortie Silver Classic Tabby**  
**(MCO fs 23) Tortie Silver Mackerel Tabby**  
**(MCO gs 22) Blue Tortie Silver Classic Tabby**  
**(MCO gs 23) Blue Tortie Silver Mackerel Tabby**

Silver-white colour on the throat and muzzle of silver tabbies/silver tortie tabbies is not a fault and the base colour may be diluted by the gene producing silver. Tarnishing is undesirable.

#### SHADED COLOURS:

- (MCO n 11) Black shaded**  
**(MCO ns 11) Silver Shaded**  
**(MCO a 11) Blue Shaded**  
**(MCO as 11) Blue Silver Shaded**  
**(MCO d 11) Red Shaded**  
**(MCO ds 11) Red Silver Shaded**  
**(MCO f 11) Tortie Shaded**  
**(MCO fs 11) Tortie Silver Shaded**  
**(MCO e 11) Cream Shaded**  
**(MCO es 11) Cream Silver Shaded**  
**(MCO g 11) Blue Tortie Shaded**  
**(MCO gs 11) Blue Tortie Silver Shaded**

Both Standard (non-silver) and Silver Shaded colours are accepted in any solid or tortoiseshell colour. Shaded cats are genetically agouti. In the shaded cat the coloured fur should give the overall appearance of a mantle on the back. The body should be as free from tabby markings as possible in adults. Kittens may well exhibit ghost tabby markings on the body for which allowance should be made.

In Standard Shaded, the undercoat should be as pale as possible with the shaft of each hair pale at the root and darkening to the base colour at the tip.

In Silver Shaded, the undercoat should be as pale a silver as possible with shallow tips shading to the basic colour; the dark points being most clearly defined on the back, head and feet and the lighter points on the flanks and ear tufts. Any tarnishing of the coat is undesirable. Nose leather, paw pads and eye rims in keeping with the basic colour.

#### BICOLOUR AND PARTICOLOUR:

**(MCO n {03/02}) Black and white**

**(MCO a {03/02}) Blue and white**

**(MCO d {03/02}) Red and white**

**(MCO e {03/02}) Cream and white**

**(MCO f {03/02}) Tortoiseshell and white**

**(MCO g {03/02}) Blue Tortie and white**

**(MCO ns {03/02}) Black Smoke and white**

**(MCO as {03/02}) Blue Smoke and white**

**(MCO ds {03/02}) Red Smoke and white**

**(MCO es {03/02}) Cream Smoke and white**

**(MCO fs {03/02}) Tortie Smoke and white**

**(MCO gs {03/02}) Blue Tortie Smoke and white**

**(MCO n 22 {03/02}) Brown Classic Tabby and white**

**(MCO n 23 {03/02}) Brown Mackerel Tabby and white**

**(MCO fs 11 {03/02}) Tortie Silver Shaded and white**  
**(MCO gs 11 {03/02}) Blue Tortie Silver Shaded and white**

Any solid, tabby, tortoiseshell, shaded or smoke colour and white. The base colour is to be present on head, back (extending down onto sides) and fully coloured tail. On tabby cats, there should be sufficient base colour to show the pattern. The minimum white permitted is some white to all four paws, underbelly and chest, with some colour allowed to these areas. Refer to the appropriate section for descriptions of coat markings
